

Questions 1–5: True / False / Not Given

Do the following statements agree with the information in the passage?

Write:

TRUE – if the statement agrees with the information

FALSE – if the statement contradicts the information

NOT GIVEN – if there is no information

1. Most previous research about happiness and health has been conducted in non-Western countries.
2. In Japan, happiness is commonly linked to excitement and personal success.
3. The researchers wanted to check whether happiness affects health independently of other factors.
4. All participants in the study clearly reported their emotional state.
5. The results may have been influenced by participants' existing serious illnesses.

Choose the correct letter **A, B, C, or D**.

6. What was the main purpose of the study?
 - A. To compare Japanese and Western lifestyles
 - B. To examine whether happiness influences lifespan
 - C. To measure emotional expression in Japan
 - D. To evaluate medical treatments in rural areas
7. Why did researchers combine the lowest two happiness categories?
 - A. Because participants were confused
 - B. Because there were too many unhappy people
 - C. Because very few people reported negative emotions
 - D. Because the scale was too complicated
8. What was one key finding of the study?
 - A. Happiness had no effect on mortality
 - B. Unhappy people were slightly more at risk
 - C. Happiness only mattered for young people
 - D. Unhappy individuals had a much higher risk of death
9. Why did researchers exclude participants who died within the first year?
 - A. To reduce sample size
 - B. To eliminate data errors
 - C. To avoid the influence of existing illnesses
 - D. To focus on younger participants

Questions 10–13: Short Answer Questions

Answer the questions using **NO MORE THAN THREE WORDS**.

10. How many participants were included in the study?
11. What type of town did the participants live in?
12. What tool was used to track deaths?
