

# Language Takeaway – Nature vs Nurture Article

## Key Vocabulary

- Personality – the combination of emotional, behavioral, and mental traits that define a person. (Uzbek: shaxsiyat) Example: Personality is shaped by both biological and environmental influences.
- Inherited traits – characteristics passed genetically from parents to children. (Uzbek: irsiy xususiyatlar) Example: Researchers studied inherited traits in families.
- Environmental influence – external factors affecting development. (Uzbek: tashqi muhit ta'siri) Example: Environmental influences can shape behavior over time.
- Privileged home environment – a family situation with access to resources and opportunities. (Uzbek: imtiyozli oilaviy muhit)
- Natural endowment – abilities someone is born with. (Uzbek: tug'ma qobiliyat)
- Genetic predisposition – a natural tendency toward certain characteristics. (Uzbek: genetik moyillik)
- Cognitive capacity – the mental ability to learn and process information. (Uzbek: aqliy salohiyat)
- Intellectual potential – the possible level of intelligence someone may achieve. (Uzbek: intellektual salohiyat)
- Psychological development – the growth of mental processes and personality. (Uzbek: psixologik rivojlanish)
- Behavioral tendencies – patterns of behavior that people regularly show. (Uzbek: xulq-atvor tendensiyalari)
- Genetic inheritance patterns – the way traits are transmitted through generations.
- Environmental conditioning – the process through which surroundings shape behavior.
- Socioeconomic advantages – benefits linked to wealth or social status.
- Educational resources – materials and opportunities that support learning.
- Developmental constraints – limits placed on development by biological factors.
